

## SCIENCE SCAVENGER HUNT

We would like you to join us on a **SCIENCE SCAVENGER HUNT!**

Scientists use lots of high-tech equipment in the lab to do their research. However, some of the things scientists use are similar to every-day items we might find in our house. **This scavenger hunt is just for fun, and the items you find cannot be used for protective equipment.**

**Can you find all of the below items in your house?**

If there's anything on the list you can't find, we've come up with some alternatives you could find, or you could try making or drawing it instead.

**You may want to ask someone in your house to help you with this activity!**

- **Safety equipment:** Scientists need to wear all their safety equipment in the lab, such as a **lab coat, gloves** and **safety goggles**. Can you find a coat, a pair of gloves and a pair of goggles? If you can't find goggles, try finding sunglasses instead! Ask a parent or guardian to take a photo of you in your 'safety equipment' and share it with us on social media.
- **Measuring beaker:** Scientists need to measure chemicals carefully. Can you find something to measure liquids with, such as a measuring jug? Try measuring 500ml of water using the measuring jug.
- **Stopwatch:** Scientists sometimes have to time their experiments carefully using a stopwatch. Can you find something to time 'experiments' with, such as a watch or clock? Try timing yourself doing 30 seconds of star jumps.
